

PORTABLE TANKS

TRANSPorta Solves the Problem of How to Refuel Site Equipment

Refuelling site-base equipment can be a real pain. Unfortunately, some equipment simply cannot travel from the worksite back to a bulk site tank or a service station to be refuelled. You have to work out how to get the Diesel or Petrol from your bulk tank or a service station to your site equipment in the back of your ute. TRANSPorta Portable Fuel Tanks have designed to solve this dilemma, offering a more time-efficient and cost-effective refueling alternative.

TRANSPorta Fuel Tanks Are The Preferred Design By The Major Oil Companies

The TRANSPorta Range of Portable Fuel Tanks has been designed for use in the arduous conditions uniquely found in Australia. Built from steel, the TRANSPorta range of portable tanks offers a superior, more robust design than the poly products currently available in the market. Our strong, yet lightweight steel construction will handle the rough and tumble associated with site refuelling. The TRANSPorta steel design is preferred by the major oil companies for filling of Diesel at service station locations throughout Australia.

TRANSPorta Fuel Tanks Have Been Designed To Prevent Fuel Theft

Specifically designed to fit on to your Ute tray, TRANSPorta tanks are supplied with tie-down points, rollover ant-spill vent and a tank level contents indicator. The theft of fuel is becoming more of a problem on site. We have designed a unique, lockable housing designed to lock away the pump in order to prevent the theft of fuel from your TRANSPorta tank.

TRANSPorta Fuel Tanks Meet The Design Standards

The TRANSPorta range meets the design requirements of AS1940, AS1692, UN31A and is Workcover approved for use throughout Australia.

TRANSPORTA PRODUCT RANGE

TRANSPorta Portable Fuel Tank Range (capacity volume in litres):

- 100 litres
- 200 litres
- 400 litres
- 600 litres
- 800 litres
- 1000 litres
